Design Electric, Inc.
Ken Smith
P.O. Box 4628
Charlottesville, VA 22905

Dear Mr. Smith,

As you may know, Design Electric's Telecommunications Division has been working on a base station 3G upgrade project for NTELOS. The sites involved in this project have been some of the oldest, and also most difficult, sites in our network. John Coffindaffer, Jason Dodson, Mike Marks and Elgie Marks have put forth a phenomenal effort, working in demanding weather conditions. Not only did Design do the work on the sites, John also project managed this venture. I have heard nothing but praise from our field and switch personnel for all Design employees involved. Please note that all of this work was done during our maintenance window which begins at midnight and closes at 6 AM.

John and his crews, including others that weren't on this project, have done several other installations and swap outs for us this year, ranging from challenging rooftops to pilot beacon and booster additions. They have all gone well. All involved are to be commended.

Please pass on my thanks to your crews. They are truly making my job a lot easier.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeff Hoffman', with a long horizontal flourish extending to the right.

Jeff Hoffman
NTELOS Construction Manager – VA West.
